Notes: When calculating handicap, subtract the sum of the lower team's combined averages from the sum of the higher team's combined averages. The result is the amount of points that the lower team gets "spotted" for every round. In the totals column for handicap, enter the sum of the handicap for all three rounds, i.e. If a team gets spotted 3 points per round, enter 9 in the totals column for handicap. There are four possible points to be won in a match, 1 for each round, and 1 for overall total. Ties are broken by number of games won. Players must be positioned on the scoresheet by average -- lowest average first and highest average last. When entering a player who does not yet have an established average, enter them in the last position, then when calculating handicaps, drop the last player's average on the opposing team. Substitutes may be made in any round as long as they are announced to the opposing captain prior to the start of the first game of the round. When substitutes are used, the handicap for that round must be recalculated for the average of the player being substituted in. Keep in mind that when using substitute players, you should try to substitute players with similar averages, and no player can end up playing against the same opponent twice.
